Inherited neuropathy suspected
The following tests should be performed in all adult patients:
HbA1c or glucose tolerance, vitamin B12, monoclonal proteins.

Nerve conduction studies show:
Ulnar motor forearm nerve conduction velocity <38 m/s (compound muscle action potential test >0.5 mV)
AND/OR
blink reflex R1 >13 ms
OR
Hereditary neuropathy with pressure palsies (HNPP) is suspected (diffuse sensory nerve conduction velocity slowing, motor conduction blocks at points of compression, prolonged motor nerve distal latencies)

Diagnosis of chronic idiopathic axonal polyneuropathy (CIAP)
OR
Consider ordering: NPPAN
Specify one of the following subpanels (see Peripheral Neuropathy Gene Panels box):
- Hereditary Sensory Neuropathy Panel
- Peripheral Neuropathy Expanded Panel
