Assessment for Zika Virus Infection

* For pregnant women who have a fetus with prenatal ultrasound findings consistent with congenital Zika virus infection, and who live in or have traveled to an area with ongoing Zika virus transmission, refer to [www.cdc.gov/zika/hc-providers/testing-guidance.html](http://www.cdc.gov/zika/hc-providers/testing-guidance.html) for further guidance.

** Zika virus IgM testing is not routinely recommended due to the long term persistence of antibodies following infection.

** ZIKV** / Zika Virus, PCR, Molecular Detection, Serum
** ZIKU** / Zika Virus, PCR, Molecular Detection, Random, Urine
** DENG**M / Dengue Virus Antibody, IgG and IgM, Serum
** DNSAG** / Dengue NS1 Antigen, Serum
** DENGs** / Dengue Virus, Molecular Detection, PCR, Serum

Positive Zika virus rRT-PCR (serum and/or urine)
Negative rRT-PCR and negative Zika IgM
Positive dengue IgM and/or NS1 antigen and/or dengue PCR
Negative dengue IgM/NS1 antigen/PCR

Acute Zika infection
No evidence of Zika virus infection
Recent dengue virus infection
No dengue virus infection
