Lupus Anticoagulant Profile Testing Algorithm

- Prothrombin time (PT)
- Activated partial thromboplastin time (APTT)
- Dilute Russell viper venom time (DRVVT)

**Additional assays may be performed if further clarification or confirmation is necessary based on preliminary review. These may include:**
- Coagulation Factor Assays
- Bethesda Units
- Fibrinogen
- Soluble Fibrin Monomer
- Coagulation Factor Inhibitor Screen
- Hexagonal Lupus Anticoagulant
- D-Dimer
- von Willebrand Factor Assays

**Unfractionated/low-molecular weight heparin or direct thrombin inhibitor (eg, dabigatran, argatroban) warfarin or low concentration of direct anti-Xa inhibitor (eg, rivaroxaban, apixaban, or edoxaban)**

An interpretive report is included with this profile. If any tests are abnormal, all results will be reviewed by a coagulation consultant.
