ADDITIONAL TESTS (indicate Test ID and name) _____ _____ _____ _____ _____		
REMARKS _____ _____ _____ _____ _____		

Urine Collection Procedure

- Remove transport bag, collection cup, transport bottle, temperature strips and security tape from the Chain of Custody Kit.
- Complete the **Patient Information** and **Test** sections of this form.
- If this is an **unwitnessed collection**, do not allow the donor into restroom until steps below are followed. This will decrease the possibility for an adulterated collection.
 - Add bluing to the toilet water.
 - Tape the top of the toilet tank closed.
 - Secure sink and soap dispensers with tape.
 - Clear all areas, including cupboards and garbage containers, of agents that could be added to urine to void testing results.
 - Do not allow coats, bags, etc that could conceal adulteration material.
- Verify donor's identity. Instruct donor not to flush toilet or run water during collection. Give collection cup to donor and tell them to contribute a minimum of 60 mL of urine.

Following Collection

- Immediately verify sufficient volume was collected and check sample integrity by examining appearance, odor or other unusual characteristics.
- Immediately record temperature, if required.
- Have donor sign and date form under **Donor Signature/Date/Printed Name**. (If donor is not able to sign, a legal representative or medical staff member may provide their own Full Name/Sign/Date.)
- Pour a minimum of 30 mL** from the collection cup into the 60 mL urine transport bottle.

- Collection personnel sign or initial and date a security tape and seal over the cap of the specimen.
- Indicate 2 patient identifiers on the specimen container.** Either write these identifiers on the container or place a label with these identifiers on the container. Identifiers must match the information that was completed at the top of the form.
 - Patient name or unique patient identifier.
 - Patient number, hospital or specimen number, or birth date.
Do **not** place security tape over these identifiers.
- Indicate if a split specimen was collected or if there were collection problems.
- When specimens are sealed, print collector's name and sign and date form under **Collector Signature/Date/Printed Name**.
Note: Date must match date on the security tape.
- Place specimen into rear pouch of transport bag and seal pouch by removing blue tape.
- Place **Chain of Custody form with original signatures** into the front pouch. Forward to Mayo Clinic Laboratories.
 - If blood, serum, or meconium is collected, complete steps 1, 2, 5, 7, 9, 10, 11, 12, 13, and 14.**
 - During multiple meconium collections, document each collection date, time, and name of collector in the remarks field.**
 - Blood or serum collection—Do NOT use alcohol or alcohol prep to clean arm before collection.**
