Lactate Dehydrogenase (LD), BF

Lactate Dehydrogenase (LD), BF

220 U/L

MCR

Reference Value
See Comment

ADDITIONAL INFORMATION

Pleural fluid lactate dehydrogenase (LDH) to serum LDH ratio >0.6 are most consistent with exudative effusions. Peritoneal fluid LDH > 220 U/L suggest secondary rather than spontaneous bacterial peritonitis in conjunction with other laboratory, imaging, and clinical findings. Synovial fluid lactate dehydrogenase (LDH) may be elevated greater than plasma or serum LDH due to inflammatory causes. Values should be interpreted in conjunction with other clinical findings. All other fluids refer to

www.mayocliniclabs.com for further interpretive information. This test has been modified from the manufacturer's instructions. Its performance characteristics were determined by Mayo Clinic in a manner consistent with CLIA requirements. This test has not been cleared or approved by the U.S. Food and Drug Administration.

Fluid Type, Lactate Dehydrogenase

MCR

PERITONEAL
