1 SDL

Test detected the presence of both morphine and its metabolite (morphine-6-beta-glucuronide). Suspect use of morphine within the past three days. Alternatively, these results could also be suggestive of heroin use. Low levels of morphine can also be seen following poppy seed ingestion.

Benzodiazepine Interpretation

1 SDL

No benzodiazepines were detected. The absence of expected drug(s) and/or drug metabolite(s) may indicate non-compliance, altered pharmacokinetics, inappropriate timing of specimen collection relative to drug administration, diluted/adulterated urine, or limitations of testing.

Stimulant Interpretation

1 SDL

Test detected the presence of gabapentin. Suspect use of gabapentin in the past 2–4 days.

Test detected the presence of pregabalin. Suspect use of pregabalin in the past 2–6 days.
