Brazil Nut Component Reflex, S

Brazil Nut, IgE, S

<0.10 kU/L

Class 0 (Negative <0.10)
Reflex testing to specific brazil nut component IgE antibodies were not performed due to undetectable total IgE brazil nut antibody. Negative IgE results for total brazil nut antibody may indicate, but does not completely rule out, a lack of sensitization to potential brazil nut allergenic components. Results from brazil nut-specific IgE antibody testing must be interpreted in the context of patient's clinical evaluation and history of allergen exposures.
