Aspergillus fumigatus IgG

 55.0 mcg/mL
High

Y165

Reference Value
<46.0

Antibody levels greater than the reference range indicate that the patient has been immunologically sensitized to the antigen. The significance of elevated IgG depends on the nature of the antigen and the patient's clinical history. The test method was the Phadia ImmunoCAP.

A. fumigatus Mix Gel Diffusion

 Positive
Abn

Y165

Reference Value
Negative

The gel diffusion method was used to test this patient's serum for the presence of precipitating antibodies(IgG) to the antigens indicated. These antibodies are serological markers for exposure and immunological sensitization. The clinical significance varies, depending on the history and symptoms. *This test was developed and its performance characteristics determined by Eurofins Viracor. It has not been cleared or approved by the U.S. Food and Drug Administration.
