## Clinical & Interpretive

### Clinical Information

The clinical significance of NS5a resistance associated variants for antiviral therapy may vary according to the clinical status and antiviral treatment experience of the HCV-infected patient.

Testing for NS5a resistance-associated variants prior to initiation of treatment with elbasvir plus grazoprevir in HCV genotype 1a infected patients is recommended.

### Reference Values

HCV NS5a Subtype: Not Detected

## Performance

### Method Description

This assay is designed to amplify HCV genotypes 1a and 1b and may not successfully amplify other HCV genotypes. This test utilizes RT-PCR and DNA sequencing to detect the presence of treatment-emergent HCV NS5a variants associated with NS5a inhibitor antiviral therapy.
