****IMPORTANT TEST REQUIREMENT INFORMATION****

1. Sodium Heparin blood is used for testing. Please review the Customized Volume Sheet on our website (www.cchmc.org/DIL) or call for adjusted volume requirements with an absolute lymphocyte count (ALC) of <1.0 K/uL. Tests affected: Antigen Stimulation, Mitogen Stimulation, CTL Function, NK Function, CD107a, and T Cell Degran.
2. Results of a concurrent CBC/Diff must accompany ALPS Panel, or Foxp3. (Results will be used to calculate absolute cell counts)
3. CSF Samples:
 - a) Fresh Specimens: Ship with frozen ice packs to keep at refrigeration temp (2–8°C/35–46°F) for receipt within 48 hours of collection.
 - b) Frozen Specimens: Freeze within 48 hours of collection. Ship samples frozen on dry ice.
4. Specimen Processing and Shipping Instructions **only** for tests marked with “**See #4**”:
 - a) Unspun whole blood: Ship as unspun whole blood at Room Temperature (20–25° C) for receipt within **24 hours** of collection.
 - b) Spun Specimens: Spin and remove serum/plasma from cells within **24 hours** of collection. Freeze separated plasma/serum immediately. Ship frozen on dry ice. Once separated from cells, the serum/plasma must stay frozen until received by the DIL. Thawed samples will be rejected.
5. Specimen Processing and Shipping Instructions **only** for tests marked with “**See #5**”:
 - a) Unspun whole blood: Ship as unspun whole blood at Room Temperature (20–25° C) for receipt within **5 days** of collection. *Chilled specimens will be rejected.*
 - b) Spun Specimens: Spin at 2000 g for 10 minutes and remove test-required plasma from cells in 500 µL aliquots within 5 days of collection. Freeze separated plasma immediately. Two aliquots are preferred. Ship frozen on dry ice. Once separated from the cells, the plasma must remain frozen until received by the DIL. *Thawed samples will be rejected.*
