

Laboratory Approach to the Diagnosis of Amyloidosis

 **Clickable PDF**
Click on blue text to view test catalog information

Prognostic/Monitoring Tests

- Echocardiography-Doppler-Strain
- CRC / Creatinine Clearance, Serum and 24-Hour Urine
- TPNT / Troponin T, Serum
- BNP / NT-Pro B-Type Natriuretic Peptide (BNP), Serum
- FLCP / Immunoglobulin Free Light Chains, Serum
- PCPRO / Plasma Cell DNA Content and Proliferation, Bone Marrow

Treatment Options

- Cyclophosphamide, bortezomib, and dexamethasone
- Melphalan and dexamethasone
- High-dose steroids
- Hematopoietic stem cell transplantation
- Clinical trials
- Organ transplantation

Note: In cases of suspected familial amyloidosis, see Amyloidosis (Familial) Test Algorithm
