

Clinical suspicion of a mosquito-borne disease (MBD) based on the following:

- Symptoms including, but not limited to:
  - Fever
  - Headache
  - Meningitis
  - Encephalitis
  - Meningoencephalitis
- Time of year (eg, during active mosquito seasons)
- Exposure history (refer to the following for potential exposure guidance):
  - [https://www.cdc.gov/arbovet/maps/ADB\\_Diseases\\_Map/index.html](https://www.cdc.gov/arbovet/maps/ADB_Diseases_Map/index.html)
  - <https://wwwnc.cdc.gov/travel/destinations/list>

Testing should be tailored based on clinical presentation, exposure history, and known endemic mosquito-borne pathogens
