

Glossary

alias. An alternative name for a test. For example, “Cat Dander” is an alias for the CAT Test ID.

batch. A set of orders that have been grouped for shipment to Mayo Clinic Laboratories.

batch processing. Combining orders into a **batch** to send to Mayo Clinic Laboratories.

batch set. A group of **batches** that may or may not have commonalities. For example, if an order contains tests that require specimens to be stored at different temperatures, the orders are grouped by temperature into one batch per temperature. These batches are called a batch set. Batch sets are typically based on timing.

custom profile. A set of tests that can be ordered with a single **test code** instead of as multiple individual tests. This function is useful when you regularly order the same set of tests. It is available only for manual test orders. The batch sheet shows the component tests, not the custom profile.

electronic system (ES). The MayoACCESS view of your Laboratory Information System (LIS).

InfoLink. A MayoACCESS module that enables you to receive notifications and to view messages that are generated automatically as a result of a system event.

Laboratory Information System (LIS). The interface your laboratory uses to order tests and view results. This interface interacts with MayoACCESS.

Location. A specific area within a facility or **Site** that shares a patient database with other Locations within the same site. For example, a pathology department might be one Location within a larger site. A Location is similar to a subaccount.

mnemonic. This can be a test code, Test ID, test name, or alias.

report search. A search that enables you to view and print test results.

Security Group. The security level or role assigned to a user. The Security Group determines which MayoACCESS functions the user can access.

Site. A facility that shares the same patient database across multiple **Locations** or subaccounts. A Site is similar to a main account.

test code. The alphanumeric code assigned to the test.

Test ID. The alphanumeric code that is used to order a test. For example, NEREG is the Test ID corresponding to the Northeast Regional Allergen Profile **test name**.

test name. The name of the test. For example, Northeast Regional Allergen Profile is the test name corresponding to the NEREG **Test ID**.

Unresolved Issues Report. A report for providing missing information that is needed to process specimens on an order. You can print this form, answer the questions, and fax the completed form to Mayo Clinic Laboratories after the specimens have been shipped.
