

## Overview

### Useful For

Diagnosing specific soft tissue and bone tumors (sarcoma) based on the observed gene fusions (eg, *PAX3/FOXO1* gene fusion observed in alveolar rhabdomyosarcoma, *EWSR1-FLI1* gene fusion for Ewing's sarcoma, *SS18-SSX1/2* gene fusion for synovial sarcoma)

### Genetics Test Information

This test evaluates 138 gene targets for the presence of somatic gene fusions and also assesses for common *BCOR* internal tandem duplications. See [Sarcoma Targeted Gene Fusion Panel](#) and [Common BCOR Tandem Duplications](#) in Special Instructions for details regarding the targeted gene regions identified by this test.

Targeted genes: *ACTB, AHRR, ALK, ASPSCR1, ATF1, ATIC, BCOR, BRD3, BRD4, CAMTA1, CARS, CCNB3, CDH11, CDX1, CD63, CEP128, CIC, CITED2, CLTC, CNBP, COL1A1, COL1A2, COL3A1, COL6A3, CREB1, CREB3L1, CREB3L2, CSF1, CXorf67, C11orf95, DDIT3, DUX4, DVL2, EML4, EPC1, EP400, ERG, ETV1, ETV4, ETV6, EWSR1, FEV, FGFR1, FLI1, FN1, FOSB, FOXO1, FOXO4, FUS, GLI1, HAS2, HEY1, HMGA2, IRF2BP2, JAZF1, KIRREL, KLF17, LAMTOR1, LPP, MAML3, MBTD, MEAF6, MED12, MIR143HG, MKL2, MYH9, NAB2, NCOA1, NCOA2, NFATC2, NFIB, NOTCH1, NOTCH2, NR4A3, NTRK1, NTRK3, NUMA1, NUTM1, NUTM2B, OMD, OPHN1, PATZ1, PAX3, PAX7, PBX1, PBX3, PDGFB, PDPN, PHF1, PLAG1, PLPP3, POU5F1, PPFIBP1, PRDM10, PRKCA, PRKCB, PRKCD, RAB2A, RAD51B, RANBP2, RNF213, RRAGB, SEC31A, SERPINE1, SETBP1, SFMBT1, SMARCA5, SP3, SQSTM1, SRF, SRSF3, SSX1, SSX2, SSX4, SS18, SS18L1, STAT6, SUZ12, S100A10, TAF15, TCF12, TEAD1, TFE3, TFG, THRAP3, TPM3, TPM4, TPR, USP6, VCL, VGLL2, WT1, WWTR1, YAP1, YWHAE, ZC3H7B, ZFP36, and ZNF444.*

### Additional Tests

Test ID	Reporting Name	Available Separately	Always Performed
SLIRV	Slide Review in MG	No, (Bill Only)	Yes

### Testing Algorithm

When this test is ordered, slide review will always be performed at an additional charge.

### Special Instructions

- [Tissue Requirements for Solid Tumor Next-Generation Sequencing](#)
- [Sarcoma Targeted Gene Fusion Panel](#)
- [Common BCOR Tandem Duplications](#)

### Method Name

Polymerase Chain Reaction (PCR)-Based Next-Generation Sequencing

### NY State Available

Yes

### Specimen

#### Specimen Type

Varies

---

## Necessary Information

**Pathology report** (final or preliminary), at minimum containing the following information, **must** accompany specimen in order for testing to be performed:

1. Patient name
2. Block number-must be on all blocks, slides and paperwork (can be handwritten on the paperwork)
3. Tissue collection date
4. Source of the tissue

## Specimen Required

**This assay requires at least 10% tumor nuclei.**

-Preferred amount of tumor area with sufficient percent tumor nuclei: tissue 144 mm(2)

-Minimum amount of tumor area: tissue 36 mm(2)

-These amounts are cumulative over up to 10 unstained slides and must have adequate percent tumor nuclei.

-Tissue fixation: 10% neutral buffered formalin, not decalcified

-For specimen preparation guidance, see [Tissue Requirement for Solid Tumor Next-Generation Sequencing](#) in Special Instructions. In this document, the sizes are given as 4mm x 4mm x 10 slides as preferred: approximate/equivalent to 144 mm(2) and the minimum as 3mm x 1mm x 10 slides: approximate/equivalent to 36mm(2).

### Preferred:

**Specimen Type:** Formalin-fixed, paraffin-embedded (FFPE) tissue

**Container/Tube:** Tissue block

**Collection Instructions:** Submit a formalin-fixed, paraffin-embedded tissue block.

### Acceptable:

**Specimen Type:** FFPE Tissue

**Slides:** 1 Stained and 10 unstained

**Collection Instructions:** Submit 1 slide stained with hematoxylin and eosin and 10 unstained, nonbaked slides with 5-micron thick sections of the tumor tissue.

**Specimen Type:** Cytology slide (direct smears or ThinPrep)

**Slide:** 1 to 3 slides

**Collection Instructions:** Submit 1 to 3 slides stained and coverslipped with a preferred total of 5000 nucleated cells or a minimum of at least 3000 nucleated cells.

Note: Glass coverslips are preferred; plastic coverslips are acceptable but will result in longer turnaround times.

**Additional Information:** Cytology slides will not be returned.

**Specimen Minimum Volume**

See Specimen Required

**Reject Due To**

Other	Decalcified specimens; bone marrow in EDTA
-------	--

**Specimen Stability Information**

Specimen Type	Temperature	Time	Special Container
Varies	Ambient (preferred)		
	Frozen		
	Refrigerated		

**Clinical and Interpretive**

**Clinical Information**

Molecular analysis of biomarkers is increasingly being utilized in oncology practices to support and guide diagnosis, prognosis, and therapeutic management of patients. Chromosomal translocations, interstitial deletions, and inversions that lead to gene fusions are common in various sarcomas such as Ewing sarcoma and rhabdomyosarcoma. This next-generation sequencing assay is used to detect specific gene fusions to assist in the diagnosis of sarcomas. See [Sarcoma Targeted Gene Fusion Panel](#) in Special Instructions for details regarding the targeted gene regions identified by this test.

**Reference Values**

An interpretive report will be provided.

**Interpretation**

An interpretive report will be provided.

**Cautions**

This assay is not validated for the detection of point variations, indels, copy number alterations, or gene expression.

This assay may detect gene fusions that are present at the RNA level, but not the DNA level, that result from cis-splicing of adjacent genes or trans-splicing.(1)

This panel can detect in-frame and out-of-frame fusions. There may be lower sensitivity in detecting out-of-frame fusions such as exon-intron, intron-intron or big insertions. This assay will only detect fusions involving at least 1 gene in the defined genes of interest list.

This assay will only detect fusions involving gene transcripts that have been defined in UCSC Genome Browser (March 2012 version) available from Illumina's iGenomes Project.(2)

Reliable results are dependent on adequate specimen collection and processing. This test has been validated on

---

cytology slides and formalin-fixed, paraffin-embedded tissues; other types of fixatives are discouraged. Improper treatment of tissues, such as decalcification, may cause PCR failure.

A negative result does not rule out the presence of a gene fusion that may be present but below the limits of detection of this assay (tumor cells comprise <10% of the cell population; targeted fusion read coverage with <10 unique fusion molecules in a sample).

The limit of detection of this assay for specific gene fusions is dependent on a number of variables including decreased sensitivity with decreased tumor percentage and decreased sensitivity with decreased level of expression of the gene fusion.

RNA is particularly labile and degrades quickly. Rapid preservation of the tumor sample after collection reduces the likelihood of degradation but there are sometimes biological factors such as tumor necrosis which interfere with obtaining a high quality RNA specimen despite rapid preservation.

The presence or absence of a fusion may not be predictive of response to therapy or prognosis in all patients.

Fusions of uncertain significance may be identified.

### Supportive Data

In a verification study, this next-generation sequencing (NGS) assay was performed in 111 sarcoma formalin-fixed, paraffin-embedded (FFPE) and cytology samples (86 fusion positive and 25 fusion negative). The NGS assay results were confirmed by RT-PCR and FISH tests. The overall accuracy of the NGS assay was 95.5% (106/111). No targeted gene fusions were detected in 20 negative control samples (100% specificity).

## Performance

### Method Description

RNA-based next-generation sequencing is performed to test for the presence of rearrangements involving targeted regions of 138 fusion genes. See [Sarcoma Targeted Gene Fusion Panel](#) and [Common BCOR Tandem Duplications](#) in Special Instructions for details regarding the targeted gene regions identified by this test. (Unpublished Mayo method)

### PDF Report

No

### Day(s) and Time(s) Test Performed

Monday through Friday; Varies

### Analytic Time

14 days

### Maximum Laboratory Time

21 days

### Specimen Retention Time

Unused portions of blocks will be returned to client. Unused slides are stored indefinitely.

### Performing Laboratory Location

Rochester

## Fees and Codes

### Fees

- Authorized users can sign in to [Test Prices](#) for detailed fee information.
- Clients without access to Test Prices can contact [Customer Service](#) 24 hours a day, seven days a week.
- Prospective clients should contact their Regional Manager. For assistance, contact [Customer Service](#).

### Test Classification

This test was developed and its performance characteristics determined by Mayo Clinic in a manner consistent with CLIA requirements. This test has not been cleared or approved by the U.S. Food and Drug Administration.

### CPT Code Information

81455
