

Antineuronal Nuclear Antibody Type 3 (ANNA-3) Titer, Serum

#### Overview

#### **Useful For**

Evaluating patients who present with a subacute neurological disorder of undetermined etiology and have risk factors for primary lung carcinoma

Reporting an end titer result from serum specimens

## **Testing Algorithm**

If the indirect immunofluorescence pattern suggests antineuronal nuclear antibody type 3 (ANNA-3), then this test will be performed at an additional charge.

## **Method Name**

Only orderable as a reflex. For more information see:

- -PAVAL / Paraneoplastic, Autoantibody Evaluation, Serum
- -DMS2 / Dementia, Autoimmune/Paraneoplastic Evaluation, Serum
- -ENS2 / Encephalopathy, Autoimmune/Paraneoplastic Evaluation, Serum
- -EPS2 / Epilepsy, Autoimmune/Paraneoplastic Evaluation, Serum
- -MDS2 / Movement Disorder, Autoimmune/Paraneoplastic Evaluation, Serum
- -AIAES / Axonal Neuropathy, Autoimmune/Paraneoplastic Evaluation, Serum
- -MAS1 / Myelopathy, Autoimmune/Paraneoplastic Evaluation, Serum

Indirect Immunofluorescence Assay (IFA)

## **NY State Available**

Yes

## **Specimen**

## Specimen Type

Serum

#### Specimen Required

Only orderable as a reflex. For more information see:

- -PAVAL / Paraneoplastic, Autoantibody Evaluation, Serum
- -DMS2 / Dementia, Autoimmune/Paraneoplastic Evaluation, Serum
- -ENS2 / Encephalopathy, Autoimmune/Paraneoplastic Evaluation, Serum
- -EPS2 / Epilepsy, Autoimmune/Paraneoplastic Evaluation, Serum
- -MDS2 / Movement Disorder, Autoimmune/Paraneoplastic Evaluation, Serum
- -AIAES / Axonal Neuropathy, Autoimmune/Paraneoplastic Evaluation, Serum

Antineuronal Nuclear Antibody Type 3
(ANNA-3) Titer, Serum

-MAS1 / Myelopathy, Autoimmune/Paraneoplastic Evaluation, Serum

## Specimen Minimum Volume

0.6 mL

#### Reject Due To

Gross	Reject
hemolysis	
Gross lipemia	Reject
Gross icterus	Reject

## **Specimen Stability Information**

Specimen Type	Temperature	Time	Special Container
Serum	Refrigerated (preferred)	28 days	
	Ambient	72 hours	
	Frozen	28 days	

## **Clinical & Interpretive**

## **Clinical Information**

Antineuronal nuclear autoantibodies (ANNA) are recognized clinically as markers of a patient's immune response to specific cancers (paraneoplastic autoantibodies).

In 1985, an antineuronal nuclear autoantibody (now known as ANNA-1 or anti-Hu)(1) was described as a serological accompaniment of subacute sensory neuropathy related to small-cell lung carcinoma (SCLC). ANNA-1 was subsequently recognized as an IgG marker for a spectrum of encephalomyeloradiculoneuropathy (including gastrointestinal dysmotilities) related to SCLC,(2) childhood neuroblastoma, and thymoma. The second antineuronal nuclear antibody to be recognized (known as ANNA-2 or anti-Ri) is an IgG marker of neurological autoimmunity related to SCLC and breast carcinoma.(3)

ANNA-3 is an IgG marker of an immune response to SCLC in patients presenting with a subacute, usually multifocal, paraneoplastic neurologic disorder.(4) Paraneoplastic sensorimotor neuropathy, cerebellar ataxia, and limbic encephalopathy are the most common presentations. However, an ANNA-3-positive patient may present with any element of an encephalomyeloradiculoneuropathy.

Other autoantibody markers of immune responses to SCLC include amphiphysin, collapsin response-mediated protein-5 (CRMP-5) IgG, Purkinje cell antibody type 2 (PCA-2), antiglial neuronal nuclear antibody (AGNA-1), voltage-gated calcium channel (P/Q-type) and potassium channel (VGKC) antibodies and muscle acetylcholine receptor antibodies.

## **Reference Values**

Only orderable as a reflex. For more information see:

#### <1:240

Neuron-restricted patterns of IgG staining that do not fulfill criteria for antineuronal nuclear antibody type 3 may be reported as "unclassified anti-neuronal IgG." Complex patterns that include nonneuronal elements may be reported as "uninterpretable."

## Interpretation

A positive result confirms that a patient's subacute neurological disorder has an autoimmune basis and predicts with 90% certainty that the patient has an aerodigestive carcinoma, usually a small-cell lung carcinoma (SCLC) that is new or recurrent and confined to the chest.

Fifteen percent of patients who are eventually proven to have small-cell carcinoma have an unrelated often more obvious cancer, either coexisting or in the past.

Antineuronal nuclear antibody type 3 (ANNA-3) has not yet been encountered in healthy subjects (n=100) or patients with lung carcinoma without a neurological accompaniment (n=100) or with other cancers (n=300).

#### **Cautions**

Antineuronal nuclear antibody type 3 (ANNA-3) is not detectable when it coexists with ANNA-1 or ANNA-2 unless its titer exceeds that of coexisting neuronal nuclear antibodies or is demonstrable by Western blot.

## **Performance**

## **Method Description**

The patient's specimen is tested by a standardized immunofluorescence assay that uses a composite frozen section of mouse cerebellum, kidney, and gut tissues. After incubation with the specimen and washing, fluorescein-conjugated goat-antihuman IgG is applied. Neuron-specific autoantibodies are identified by their characteristic fluorescence staining patterns. Specimens that are scored positive for any neuronal nuclear or cytoplasmic autoantibody are titrated. Interference by coexisting non-neuron-specific autoantibodies can usually be eliminated by serologic absorption. (Honorat JA, Komorowski L, Josephs KA, et al. IgLON5 antibody: Neurological accompaniments and outcomes in 20 patients. Neurol Neuroimmunol Neuroinflamm. 2017;4[5]:e385. Published 2017 Jul 18. doi:10.1212/NXI.000000000000385)

Western blot is performed, as needed, to confirm seropositivity.

## **PDF Report**

No

## Day(s) Performed

Monday through Sunday

#### Report Available

5 to 8 days

## **Specimen Retention Time**

28 days

## **Performing Laboratory Location**

Mayo Clinic Laboratories - Rochester Main Campus

#### **Fees & Codes**

#### **Fees**

- Authorized users can sign in to <u>Test Prices</u> for detailed fee information.
- Clients without access to Test Prices can contact <u>Customer Service</u> 24 hours a day, seven days a week.
- Prospective clients should contact their account representative. For assistance, contact <u>Customer Service</u>.

#### **Test Classification**

This test was developed and its performance characteristics determined by Mayo Clinic in a manner consistent with CLIA requirements. It has not been cleared or approved by the US Food and Drug Administration.

#### **CPT Code Information**

86256
