

Free Fatty Acids, Total, Serum

Overview

Useful For

Evaluation of metabolic status of patients with endocrinopathies

Monitoring of control of diabetes mellitus

Monitoring the effects of therapeutic diet/exercise lifestyle changes

Method Name Enzymatic Colorimetric

NY State Available Yes

Specimen

Specimen Type Serum

Specimen Required

Patient Preparation:

1. Fasting: 12 hours, required

- 2. Patient must not consume any alcohol for 24 hours before the specimen is collected.
- 3. Patient should not be receiving therapeutic heparin.

Collection Container/Tube: Preferred: Serum gel Acceptable: Red top Submission Container/Tube: Plastic vial Specimen Volume: 1 mL Collection Instructions: 1. Within 45 minutes of collection, centrifuge and aliquot 1 mL of serum into a plastic vial. 2. Immediately freeze specimen.

Forms

If not ordering electronically, complete, print, and send a <u>Cardiovascular Test Request Form</u> (T724) with the specimen.

Specimen Minimum Volume

0.5 mL

Reject Due To

Free Fatty Acids, Total, Serum

Gross	Reject
hemolysis	
Gross lipemia	Reject
Gross icterus	Reject

Specimen Stability Information

Specimen Type	Temperature	Time	Special Container
Serum	Frozen	7 days	

Clinical & Interpretive

Clinical Information

Elevated serum concentrations of nonesterified fatty acids (NEFA) are associated with cardiovascular disease, metabolic syndrome, obesity, and type 2 diabetes mellitus. NEFA are causally linked with insulin resistance and inflammation of vascular endothelium.

Reference Values

> or =18 years: 0.00-0.72 mmol/L
Reference values have not been established for patients who are <18 years of age.</p>

Interpretation

Abnormally high levels of free fatty acids are associated with uncontrolled diabetes mellitus and with conditions that involve excessive release of a lipoactive hormone such as epinephrine, norepinephrine, glucagon, thyrotropin, and adrenocorticotropin.

Cautions

Patients receiving therapeutic heparin are unsuitable for this analysis. Heparin causes the release of free fatty acids by stimulating the activity of lipoprotein lipase, which causes triglycerides associated with blood lipoproteins to release free fatty acids.

In order to eliminate the generation of free fatty acids from triglycerides by serum lipases (causing erroneous elevations), serum should be frozen as soon as possible after it is collected and shipped frozen.

Free Fatty Acids, Total, Serum

Performance

Method Description

In the presence of adenosine triphosphate and coenzyme A (CoA), serum non-esterified fatty acids form acyl-CoA, adenosine monophosphate and pyrophosphate when treated with acylCoA synthetase. The acylCoA is then oxidized by adding acylCoA oxidase to produce hydrogen peroxide, which in the presence of added peroxidase allows for the oxidative condensation of 3-methyl-N- (beta-hydroxyethyl)-aniline with 4-aminoantipyrine to form a purple colored end product. PDF Report

No

Day(s) Performed Monday through Friday

Report Available 1 to 3 days

Specimen Retention Time 7 days

Performing Laboratory Location

Mayo Clinic Laboratories - Rochester Main Campus

Fees & Codes

Fees

- Authorized users can sign in to <u>Test Prices</u> for detailed fee information.
- Clients without access to Test Prices can contact <u>Customer Service</u> 24 hours a day, seven days a week.
- Prospective clients should contact their account representative. For assistance, contact <u>Customer Service</u>.

Test Classification

This test has been cleared, approved, or is exempt by the US Food and Drug Administration and is used per manufacturer's instructions. Performance characteristics were verified by Mayo Clinic in a manner consistent with CLIA requirements.
