

Methylphenidate and Metabolite, Random,
Urine

#### Overview

#### **Useful For**

Monitoring urine methylphenidate and ritalinic acid concentrations to assess compliance in patients

## **Special Instructions**

Clinical Toxicology CPT Code Client Guidance

#### **Method Name**

Liquid Chromatography Tandem Mass Spectrometry (LC-MS/MS)

#### **NY State Available**

Yes

# **Specimen**

# **Specimen Type**

Urine

#### Additional Testing Requirements

If urine creatinine is required or adulteration of the sample is suspected, also order ADULT / Adulterants Survey, Random, Urine. For more information, see ADULT / Adulterants Survey, Random, Urine.

#### Specimen Required

**Supplies:** Sarstedt Aliquot Tube 5 mL (T914) **Collection Container/Tube:** Plastic urine container **Submission Container/Tube:** Plastic, 5-mL tube

**Specimen Volume:** 5 mL **Collection Instructions:** 

- 1. Collect a random urine specimen.
- 2. No preservative.

#### **Additional Information:**

- 1. No specimen substitutions.
- 2. STAT requests are **not accepted** for this test.
- 3. Submitting less than 1 mL will compromise the ability to perform all necessary testing.

#### **Forms**

If not ordering electronically, complete, print, and send a <u>Therapeutics Test Request</u> (T831) with the specimen.

# Specimen Minimum Volume

Methylphenidate and Metabolite, Random,
Urine

0.5 mL

# Reject Due To

Gross	ОК
hemolysis	
Gross icterus	OK

## **Specimen Stability Information**

Specimen Type	Temperature	Time	Special Container
Urine	Refrigerated (preferred)	10 days	
	Frozen	28 days	

# **Clinical & Interpretive**

#### **Clinical Information**

Methylphenidate (MPH) is utilized for the treatment of attention-deficit hyperactivity disorder and narcolepsy. MPH has two chiral centers and is marketed as a racemic mixture and as the active d-enantiomer of racemic MPH. Although the exact mechanism of its action has not been fully defined, it blocks the reuptake of norepinephrine and dopamine into the presynaptic neuron thus increasing the concentrations of these monoamines in the extraneural space.

#### **Reference Values**

Negative (Positive results are reported with a quantitative result.)

Cutoff concentrations by liquid chromatography tandem mass spectrometry:

Methylphenidate: 10 ng/mL Ritalinic Acid: 50 ng/mL

# Interpretation

Methylphenidate (MPH) has an oral bioavailability of 22% to 100% with peak concentrations occurring around 2 hours for instant release and approximately 5 to 6 hours for extended-release formulations. The half-life of MPH is 2 to 4 hours. MPH is extensively metabolized to ritalinic acid, which is an inactive metabolite. The half-life of ritalinic acid is about 3 to 4 hours. Only small quantities (<1%) of unchanged MPH appear in the urine as most of the dose (60%-86%) is excreted in the urine as ritalinic acid. The presence of MPH or ritalinic acid in the urine indicates the patient has taken MPH in the past 1 to 2 days.

# **Cautions**

No significant cautionary statements.

#### **Performance**

# **Method Description**

The urine sample is centrifuged, diluted with internal standard and clinical laboratory reagent water, and then analyzed by liquid chromatography tandem mass spectrometry. (Unpublished Mayo method)

#### **PDF Report**

No

# Day(s) Performed

Monday, Wednesday, Friday

#### **Report Available**

2 to 4 days

# **Specimen Retention Time**

14 days

#### **Performing Laboratory Location**

Mayo Clinic Laboratories - Rochester Superior Drive

#### **Fees & Codes**

# Fees

- Authorized users can sign in to <u>Test Prices</u> for detailed fee information.
- Clients without access to Test Prices can contact <u>Customer Service</u> 24 hours a day, seven days a week.
- Prospective clients should contact their account representative. For assistance, contact <u>Customer Service</u>.

Methylphenidate and Metabolite, Random, Urine

#### **Test Classification**

This test was developed and its performance characteristics determined by Mayo Clinic in a manner consistent with CLIA requirements. It has not been cleared or approved by the US Food and Drug Administration.

## **CPT Code Information**

G0480
