

Overview

Useful For

Identifying undetermined metabolic bone disease in submitted slide specimens

Diagnosing renal osteodystrophy

Diagnosing osteomalacia

Diagnosing osteoporosis

Diagnosing Paget disease

Assessing the effects of therapy

Identifying disorders of the hematopoietic system

Diagnosing aluminum toxicity

Identifying the presence of iron in the bone

Specimen

Specimen Type

Varies

Necessary Information

[Bone Histomorphometry: Patient Information](#) (T352) must be completed and sent with the specimen. The laboratory requires this information in order to perform testing.

Specimen Required**Specimen Type:** Bone**Source:** Anterior iliac crest**Slides:** 2**Submission Container/Tube:** Plastic slide holder**Specimen Volume:** A minimum of 1 Goldner Trichrome-stained slide and 1 hematoxylin and eosin-stained slide are required. One tetracycline slide should be submitted as applicable.**Collection Information:** For complete instructions see [Bone Histomorphometry Specimen Preparation \(T579\)](#).**Forms**[Bone Histomorphometry: Patient Information \(T352\)](#) is required**Specimen Minimum Volume**

Clinical & Interpretive**Clinical Information**

Bone histomorphometry is a very sophisticated procedure utilizing full thickness bone biopsy.

Techniques such as 2-time interval labeling with tetracycline permit the direct measurement of the rate of bone formation. The information derived is useful in the diagnosis of metabolic bone diseases including renal osteodystrophy, osteomalacia, and osteoporosis. Other obtainable information relates to disorders such as aluminum toxicity and iron abnormalities.

Reference Values

An interpretive report will be provided.

Interpretation

Clinical endocrinologists trained in histomorphometric techniques review and interpret the histological appearance.

A pathologist interprets the bone marrow from a hematoxylin and eosin-stained slide.

No histomorphometric values are given.

Cautions

Mineralization or bone formation rates can be done only when tetracycline has been administered on a specific schedule prior to biopsy.

Biopsy site of preference is iliac crest.

Performance**Method Description**

The histologic appearance of all sections is reviewed and interpreted by a clinician-histomorphometrist. A hematoxylin and eosin-stained section is reviewed for abnormalities by a pathologist. Telephone consultations with responsible physicians are carried out whenever possible.(Hodgson SF, Johnson KA, Muhs JM, et al. Outpatient percutaneous biopsy of the iliac crest: methods, morbidity, and patient acceptance. *Mayo Clin Proc.* 1986;61:28-33)

PDF Report

No

Day(s) Performed

Monday through Friday

Report Available

21 to 26 days

Specimen Retention Time

Slides will be returned 2 weeks after result released.

Performing Laboratory Location

Mayo Clinic Laboratories - Rochester Main Campus

Fees & Codes

Fees

- Authorized users can sign in to [Test Prices](#) for detailed fee information.
- Clients without access to Test Prices can contact [Customer Service](#) 24 hours a day, seven days a week.
- Prospective clients should contact their account representative. For assistance, contact [Customer Service](#).
