

# **Test Definition: FPALI**

Paliperidone, Serum

# Overview

### Method Name

High Performance Liquid Chromatography/Tandem Mass Spectrometry (LC-MS/MS)

#### NY State Available

Yes

Specimen

Specimen Type Serum Red

#### Specimen Required

\*\*\*Must submit one specimen per order. Specimens cannot be shared between multiple orders.\*\*\*

Specimen Type: Serum

Collection Container/Tube: Red

Submission Container/Tube: Plastic vial

Specimen Volume: 1 mL

**Collection Instructions:** Draw blood in a plain, red-top tube(s). (Serum gel tube is not acceptable.) Spin down and send 1 mL of serum refrigerate in a preservative-free plastic vial.

#### **Specimen Minimum Volume**

0.5 mL

#### **Reject Due To**

Other	Polymer gel separation tube (SST or PST)
-------	--

#### **Specimen Stability Information**

Specimen Type	Temperature	Time	Special Container
Serum Red	Refrigerated (preferred)	14 days	
	Ambient	14 days	
	Frozen		

## **Clinical & Interpretive**

#### **Reference Values**

None Detected ng/mL

# **Test Definition: FPALI**

Paliperidone, Serum

Units: ng/mL

# Interpretation

Paliperidone is an atypically-structured antipsychotic agent and the main pharmacologically active metabolite of Risperidone (commonly referred to as 9-hydroxyrisperidone).

The following mean plasma paliperidone concentrations have been reported: 3 mg single extended release oral dose: 4.9 ng/mL at 24 hours

6 mg single extended release oral dose: 10 ng/mL at 24 hours

12 mg single extended release oral dose: 20 ng/mL at 24 hours

3 mg extended release oral dose for 7 days: 11 ng/mL at 22 hours after last dose

78-156 mg IM once monthly for 6 months: 10-20 ng/mL (median trough concentration)

Acute ingestion of 180 and 504 mg extended release paliperidone resulted in serum concentrations of 170 and 883 ng/mL, respectively, approximately 40 hours after ingestion and the reported serum concentration following acute ingestion of 270 mg was 100 ng/mL 16 hours post-ingestion.

A femoral blood paliperidone concentration of 240 ng/mL was the only finding in an individual who died 2 weeks after a 525 depot IM injection.

The blood/plasma ratio of paliperidone is 0.7-0.8.

# Performance

PDF Report No

Day(s) Performed Monday - Sunday

Report Available 8 to 10 days

Performing Laboratory Location NMS Labs

# Fees & Codes

Paliperidone, Serum

#### Fees

- Authorized users can sign in to <u>Test Prices</u> for detailed fee information.
- Clients without access to Test Prices can contact <u>Customer Service</u> 24 hours a day, seven days a week.
- Prospective clients should contact their account representative. For assistance, contact <u>Customer Service</u>.

## **Test Classification**

This test was developed and its performance characteristics determined by NMS Labs. It has not been cleared or approved by the U.S. Food and Drug Administration.

## **CPT Code Information**

80342
