

Test Definition: FHLCA

Immunoglobulin A (IgA) Heavy and Light Chain (HLC) Pairs, Kappa and Lambda with Ratio

Overview

Method Name

Turbidimetric

NY State Available

Yes

Specimen

Specimen Type

Serum

Specimen Required

Collection Container/Tube: Red top or serum gel

Submission Container/Tube: Plastic vial **Specimen Volume:** 0.75 mL serum

Collection Instructions:

- 1. Centrifuge immediately after coagulation (30 minutes) to prevent hemolysis.
- 2. Aliquot 0.75 mL of serum into a plastic vial.
- 3. Send refrigerate.

Specimen Minimum Volume

Serum: 0.5 mL

Reject Due To

Test Definition: FHLCA

Immunoglobulin A (IgA) Heavy and Light Chain (HLC) Pairs, Kappa and Lambda with Ratio

Serum	Refrigerated (preferred)	14 days	
	Ambient	14 days	
	Frozen	14 days	

Clinical & Interpretive

Clinical Information

Refer to www.labcorp.com/test-menu/

Reference Values

IgA Kappa (g/L): 0.48-2.82 IgA Lambda (g/L): 0.36-1.98

IgA Kappa:IgA Lambda ratio: 0.80-2.04

Interpretation

An elevated IgA heavy and light chain (HLC) pair ratio suggests a clonal proliferation of an IgA kappa clone of plasma cells.

A low IgA HLC pair ratio suggests a clonal proliferation of an IgA lambda clone of plasma cells.

Cautions

Decisions on patient evaluation and management must not be given on the basis of IgA kappa, IgA lambda, or IgA kappa: IgG lambda ratio measurements alone. Clinical history and other laboratory findings must be taken into account.

Heavy and light chain (HLC) quantitation should be used as a complementary method to serum protein electrophoresis.

The effect of therapeutic drugs on the measurement of IgA kappa and IgA lambda by this assay has not been evaluated.

Small increases in the concentrations of monoclonal IgA proteins may not result in an altered HLC pair ratio.
