COMPREHENSIVE Pap Profile
Test ID: FPAPC

**EXPLANATION:** The following new orderable, referred to Pacific Rim Pathology Medical Corp, will be available August 29, 2017.

**REFERRAL LAB CODE:** FLT3184116

**METHOD:** Liquid Based Pap w/automated screen

**REFERENCE VALUES:** Interpretive report will be provided.

**REFLEX TEST:**

**SPECIMEN REQUIREMENTS:**
For optimal interpretation, Pap smears should be collected near the middle of the menstrual cycle (preferably 2 weeks after the first day of the last menstrual period). Avoid douching, lubricant use, and sexual intercourse for 24 hours prior to specimen collection.
If lubricant is necessary for collection, please make sure the use of lubricant like pap jelly that does not have carbomer listed as an ingredient. It should be applied sparingly on the outer portion of the speculum with great care.

**Submit only 1 of the following specimens:**

**Broom Collection Device (Supply T056)**

**Specimen Type:** Cervical  
**Collection Container/Tube:** PreservCyt solution vial  
**Specimen Volume:** 16 mL

**Collection Instructions:**
1. Obtain adequate sampling from cervix using broom-like collection device. If desired, use lukewarm water to lubricate the speculum. Insert the central bristles of the broom into the endocervical canal deep enough to allow the shorter bristles to fully contact the ectocervix. Push gently, and rotate the broom in a clockwise direction 5 times.
2. Rinse the broom as quickly as possible into the PreservCyt solution vial by pushing broom into bottom of vial 10 times, forcing bristles apart.
3. As a final step, swirl broom vigorously to further release material. Discard the collection device.
4. Tighten cap on vial so that the torque line on the cap passes the torque line on the vial.
5. **Specimen vial must be labeled with a minimum of 2 unique identifiers** (patient's name and medical record or date of birth).

**Endocervical Brush/Spatula Collection Device (Supply T434)**

**Specimen Type:** Ectocervix and endocervix  
**Collection Container/Tube:** PreservCyt solution vial  
**Specimen Volume:** 16 mL

**Collection Instructions:**
1. Obtain an adequate sampling from the endocervix using a plastic spatula. If desired, use lukewarm water to warm and lubricate the speculum. Select contoured end of plastic spatula and rotate it 360 degrees around the entire exocervix while maintaining tight contact with exocervical surface.

2. Rinse spatula as quickly as possible into the PreservCyt solution vial by swirling spatula vigorously in vial 10 times. Discard the spatula.

3. Next, obtain and adequate specimen from endocervix using an endocervical brush device. Insert the brush into the cervix until only the bottom-most fibers are exposed. Slowly rotate 1 quarter or 1 half turn in 1 direction. **Do not over-rotate.**

4. Rinse the brush as quickly as possible in the PreservCyt solution by rotating the device in the solution 10 times while pushing against the PreservCyt vial wall.

5. Swirl brush vigorously as final step to further release material. Discard the brush.

6. Tighten the cap so that the torque line on the cap passes the torque line on the vial.

7. **Specimen vial must be labeled with a minimum of 2 unique identifiers** (patient's name and medical record or date of birth).

**TEST ALGORITHM:** If Liquid Thin Prep is abnormal, Physician Interpretation of Thin Prep Pap (Z5113) will be performed at an additional charge.

If HPV is positive, a reflex to FHPV1 - HPV1618 will be added at an additional charge.

**SPECIMEN STABILITY INFORMATION:**
