

## **UroVysion for Detection of Bladder Cancer, Urine**

**Test ID:** FUROC

### **Explanation:**

Due to high specimen volumes and staffing impacts, the FUROC test will have TAT delays significantly beyond what is published. All specimens will be stabilized and performed/reported as soon as possible. Please anticipate an extended TAT of cases by up to 5 weeks longer than published TAT of cases. Please share this information with ordering physicians for awareness as they schedule collection of these specimens. An update will be provided once testing TAT returns to normal.

### **Questions**

Contact Gina L Kahnke, Laboratory Technologist Resource Coordinator at 800-533-1710.
