

***Streptococcus pneumoniae* IgG Antibodies, 23 Serotypes, Serum**

Test ID: PN23M

Explanation:

Due to reagent issues Serotype 19A (57) is not being reported. Notification will be sent when testing resumes.

Note:

An adequate response to pneumococcal vaccination is generally thought to be demonstrated when a patient shows response to at least 50% of the serotypes in the PN23M assay. For most patients, this can be assessed even if only 22 serotypes are reported.
