

Supersaturation Profile, 24 Hour, Urine

Test ID: SUP24

Explanation: On the effective date, pediatric reference intervals will be added to SUP24. The minimum volume requirement is also being updated.

The enhanced report will also include a pie chart and table labeled “Your Likely Stone Type”. The predicted kidney stone type is determined by using a Mayo-developed model trained on the age, sex, urine chemistry measurements, and supersaturation delta Gibbs values included in the 24-hour urine supersaturation panel.

Current Requested Minimum Volume
10 mL

New Requested Minimum Volume
16 mL

Please see the online setup file for the most up to date test build information.
