

Antimicrobial Susceptibility, Mycobacterium tuberculosis Complex, First Line, Varies

Test ID: TB1LN

Explanation: The reagent issues affecting this test have been resolved. This test is now orderable and normal testing patterns will resume immediately. This is the preferred test for first-line antimycobacterial agents against M tuberculosis complex.

Note: This test uses an FDA-cleared commercial system for rapid broth susceptibility testing of M tuberculosis complex and assesses resistance to antimycobacterial drugs at the critical concentrations. If resistance to a first line antimicrobial agent is detected reflex testing for confirmation of resistance and second line agents will be performed and charged.
