

Susceptibility, *Mycobacterium tuberculosis* Complex, Second Line, Varies

Test ID: TB2LN

Explanation: The first line antimicrobial agents' isoniazid, rifampin, and ethambutol have been reported under this laboratory developed microtiter broth dilution method since August 2025 due to reagent issues. The reagent issues affecting our FDA-cleared commercial system for rapid broth susceptibility testing of *Mycobacterium tuberculosis* complex isolates for first line antimicrobial agents have been resolved.

Mayo test code **TB1LN / Antimicrobial Susceptibility, *Mycobacterium tuberculosis* Complex, First Line, Varies** should now be ordered since the first line antimicrobial agents will no longer be reported under this method.

Note: Isolate submissions received for test code TB2LN on or after 1/7/2026 will cease the inclusion of the first line antimicrobial agents' isoniazid, rifampin, and ethambutol.
