

## Alzheimer Disease Evaluation, Spinal Fluid

**Test ID:** ADEVL

### **Explanation:**

Due to a reagent-related issue impacting assay performance, ADEVL results are currently delayed beyond the published turnaround time. Specimens are being stabilized and maintained frozen to ensure integrity, and recollection is not required at this time.

We are actively working with the manufacturer to resolve the issue and will reassess as additional information becomes available. The duration of this delay is currently under evaluation. We appreciate your patience and will provide an update as soon as normal testing operations resume.

### **Questions**
