

Rapidly Progressive Dementia Evaluation, Spinal Fluid

Test ID: RPDE

Explanation:

Due to a reagent-related issue impacting assay performance, RPDE results are currently delayed beyond the published turnaround time. As part of mitigation efforts, testing is being transitioned to the RTQPC component, and orders may be converted accordingly. Specimens will continue through the RTQPC testing where applicable and are being maintained to ensure integrity. Recollection is not required at this time.

We are actively working with the manufacturer to resolve the issue. The duration of this delay is currently under evaluation. We appreciate your patience and will provide an update as soon as normal testing operations resume.
