

## Antimicrobial Susceptibility Panel, Yeast, Varies

**Test ID:** MMLYP

**Explanation:** Due to continued reagent performance issues, we are returning to temporarily being unable to report amphotericin B for *Candida glabrata* isolates. We expect this to last for 2-3 months and will provide an update when reporting resumes. If the clinical situation warrants, amphotericin B testing can be ordered and forwarded to U.T. Health Science Ctr San Antonio under test code: FAMBS / Amphotericin B Susceptibility Testing.
