**Ceruloplasmin, S**

**16.0 mg/dL**

**MCR**

**Reference Value**  
21.7–43.3

**Low**

A low concentration of ceruloplasmin in serum can be found in patients with Wilson disease, copper deficiency, Menkes disease, and hereditary aceruloplasminemia. Conditions with severe protein loss or liver failure are also associated with low ceruloplasmin levels. Furthermore, reduced ceruloplasmin concentrations can be observed in carriers for Wilson disease. If the clinical suspicion for Wilson disease is high in this patient, consider further testing including but not limited to urine copper, serum copper, and Wilson disease full gene analysis. Please contact the laboratory at 1-800-533-1710 or the on-line test catalog at [mayomedicallaboratories.com](http://mayomedicallaboratories.com) for more information.
