CEA, Pancreatic Cyst

CEA, Pancreatic Cyst

1 **SDL**

355 ng/mL

A pancreatic cyst fluid CEA concentration of => 200 ng/mL is very suggestive but not diagnostic of a mucinous cyst (Khalid A, and Brugge W, Amer. J. Gastroenterol. 102:2339-49;2007). This clinical interpretation is only applicable to cyst fluid. For pancreatic sources other than cyst fluid clinical interpretation is not available. This test result should be interpreted in the context of clinical presentation, imaging and cytology findings.

The testing method is an immunoenzymatic assay manufactured by Beckman Coulter Inc. and performed

on the UniCel Dxl 800.

Values obtained with different assay methods or kits may be different and cannot be used interchangeably.

Test results cannot be interpreted as absolute evidence for the presence or absence of malignant disease.
