Alpha-Fetoprotein, CSF

1 SDL

Received: 14 Jul 2017 13:26

Reported: 14 Jul 2017 13:27

 **11 ng/mL**

High

REFERENCE VALUE

<1.5
Values for AFP in CSF have not been formally established for newborns and infants. The available literature indicates that by 2 months of age, levels comparable to adults should be reached (Ann Clin Biochem 2005; 42:24-29).

The testing method is an immunoenzymatic assay manufactured by Beckman Coulter Inc. and performed on the UniCel Dxl 800.

Values obtained with different assay methods or kits may be different and cannot be used interchangeably.

Test results cannot be interpreted as absolute evidence for the presence or absence of malignant disease.

Alpha-Fetoprotein values are not interpretable in pregnant females for the investigation of malignant disease.

Laboratory Notes

- 1 This test has been modified from the manufacturer's instructions. Its performance characteristics were determined by Mayo Clinic in a manner consistent with CLIA requirements. This test has not been cleared or approved by the U.S. Food and Drug Administration.
