Syphilis Total Ab, S

Reactive
Abn

Results suggest infection with *Treponema pallidum* at some point in time. Results do not distinguish between recent or past infection, or between treated and untreated syphilis as treponema-specific IgG may remain elevated despite appropriate therapy. Falsely reactive treponemal results may occur; additional testing by a non-treponemal assay is recommended if not previously performed on this sample.

SDL
Reference Value
Nonreactive
